

Please amend the Abstract as follows:

a1 A translating apparatus includes ~~translating means~~ a translator for translating document data into another language, an output unit for outputting the translated document data translated by the ~~translating means~~ translator, a mode setting unit for setting in a first mode or a second mode, and a controller. In a case where the first mode is set, the controller controls the ~~translating means~~ translator so as to translate the document data into a plurality of languages, and controls the output unit so as to output the translated document data by each language group. In a case where the second mode is set, the controller controls the ~~translating means~~ translator so s to translate the document data into a plurality of languages, and controls the output unit so as to output the translated document data by group including each translated language document date.
